MYP YEAR 5 DIGITAL DESIGN

Project title: Crafting a personal website with html and css

Name: Sia Mariam Leno

Grade: 10

Supervisor: Mr.C.C Maurice

DESIGN CYCLE STAGES

1. A good website has to have these following principles:
visual hierarchy it guides readers through processing your website's content and visual elements. Easy navigation makes the website easy to navigate. Use readable and web friendly fonts by using the right fonts. Design for both desktop and mobile, keep the design consistent and keep it simple.

   While HTML defines the structure, CSS takes charge of the visual presentation of a website. It's responsible for the layout, colours, fonts, spacing, and overall aesthetic appeal. CSS rules are applied to HTML elements, giving them specific styles and appearances.

   My audience is future colleges, they need my resume and information for them to go through in order to see if they will accept me or not. My purpose is to convince them through this website my personality, my skills, and what i'm good at,my hobbies etc and show that i'm more suitable and i' m a good student who will bring a plus to the college image.

2. For the styling i'll use:

   - <u>the font:</u> `Segoe UI, Tahoma, Geneva, Verdana, sans-serif`

   - <u>the color palette :</u> black and brown

   <u>Plan for the content:</u>

   -Home page: a brief introduction about me and the welcome page
   -About me page: where i'll be talking about me, and put my informations
   -Contact page: where the info will be
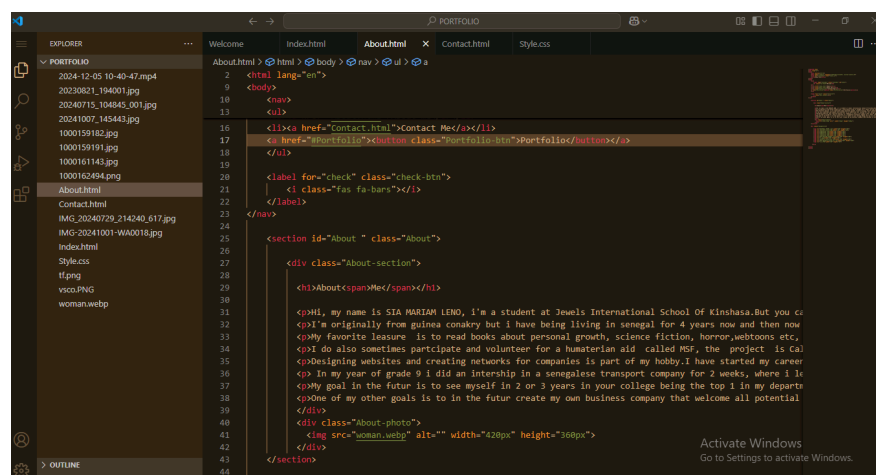

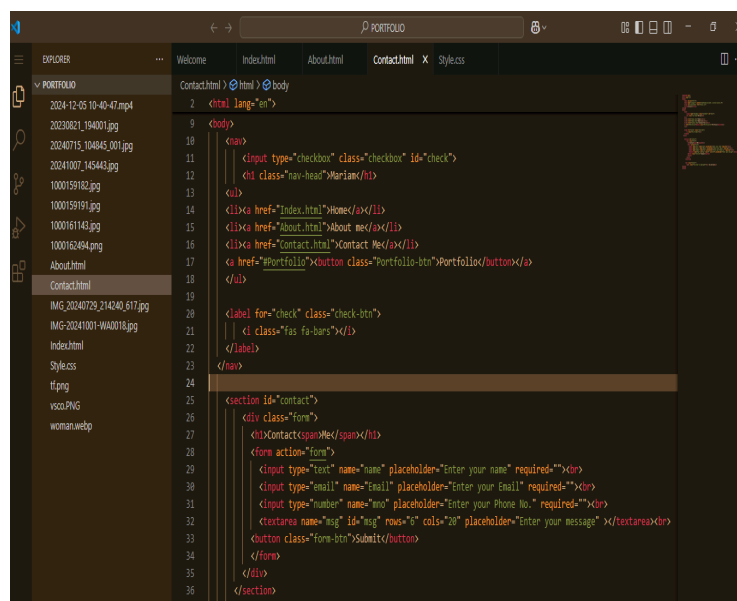

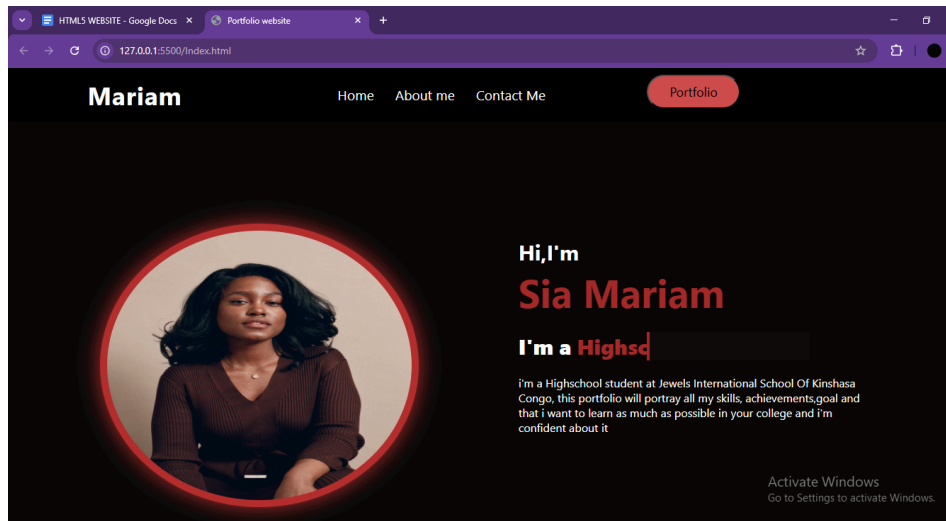

Contact me

Name
Email
Phone

Submit

3. I had problems linking the three pages and making them function. In order to solve the problems I had to ask for help from my supervisor and then apply the information that he gave me on the work. I researched some impirations from the youtube videos.

EVALUATION:

The website came exactly as I imagined it'll look like. During the process i had problems dealing with my Visual Studio Code because even if i put the correct code it'll come out differently and not as i want. I restarted many times because of that. I also look out on the internet for some inspiration and code that will help me make my ideas come to life.

 I also had problems with some code like the contact page and also some buttons that I put in won't function because of my VSCO. But then I asked some advice from my teacher to solve the problem and I was able to make the 3 pages function well and link each other. During the process I also learned critical thinking, increased my typing speed and acquired the ability to receive criticism.

Feedback from Eloi leno:

There are accessibility problems (responsiveness) for the buttons and after that I find it very appealing, colors are well chosen and everything else is good.
